## Notes:

1. Always follow the adhesive manufacturers directions.
2. High Temperature (HT) installations are those areas where, either geographically or in the built environment, the flooring will be exposed to high and/or large variations in temperature, direct heat, sunlight or humidity.
3. Pressure Sensitive Adhesives are not recommended and may void the flooring warranty. Where the installation requires this type of adhesive, seek specialist advice from your adhesive supplier.
4. Specialist installations, such as vinyl plank over an acoustic underlay, require specialist adhesive advice. Contact your adhesive supplier.
5. Use of non-recommended adhesives may void the product warranty. Any warranty claim must be accompanied with proof of adhesive used.
